MY Ambition:
An Engineer's & Entrepreneur's Journey

Arjun Vitthal Mankuskar

About Me: Arjun Vitthal Mankuskar

Hi, I'm Arjun. At my core, I'm a **creative thinker** who loves figuring out tough problems.

I'm also a huge technology enthusiast—I just love building new things.

I get a lot of my strength from my family. They've always supported me and taught me the value of learning. My dad is a gold businessman and my mom is a government teacher, and honestly, they're the best parents in the world.

My Ambition

I have two big goals that I'm really excited about.

Expert AI/ML Engineer

But I don't want to stop there. Just like my dad, I want to be a successful businessman, too.

Build My Own Business

For me, these two goals go hand-in-hand. I want to use my tech skills to build something new and create my own business.

This is the path that will help me achieve my personal dreams: to **travel the whole world** and, as a huge fan of cars and bikes, **build my own collection**.

Why This Ambition?

So, why these goals? It really comes down to two things.

Passion for Technology

First, I've just always been fascinated by technology. The idea of using AI to solve a real-world challenge genuinely excites me.

Family Inspiration

But the other, and bigger, part is my family. I grew up watching my dad run his own business and my mom dedicate herself to teaching. They both showed me what's possible with hard work and a clear purpose. My ambition is really a mix of my own passion for tech and the amazing example they set for me.

How I'll Get There

Here's my plan to make it all happen:

01

Learn Everything I Can

First, I'm focused on finishing my education and really mastering all the skills I need for AI and Machine Learning.

02

Get My Hands Dirty

I'm going to find internships and projects where I can use these skills in the real world and learn from people who are already doing it.

03

Learn the Business Side

Tech skills are one thing, but I'll also be learning about business principles—a lot of it from watching my dad.

04

Build My Future

The final step is to put it all together: use my tech and business knowledge to start my own projects and, eventually, my own company.

THANK YOU
